

RFID POCKET READER WITH BLUETOOTH® WIRELESS TECHNOLOGY

UHF RFID technology allows users to read and write information on devices, name tags or transponders, which are placed on objects for their identification. Read/write operations can occur without a line-of-sight and at longer distances and faster speeds compared to other passive technologies, thus allowing a less expensive and more efficient automated process.

KEYBOARD EMULATION AND BATCH MODE OPERATION

The HID version supports native keyboard emulation allowing the reader to interact directly with legacy applications, office automation software or any other generic solution requiring manual input.

The reader can also operate in Batch Mode allowing the reader to store EPC bar codes into the internal memory when the reader is out of radio range.

MULTIPLE APPLICATIONS

Designed for mobile operators in outdoor and indoor areas, the DLR-BT001 reader is ideal for in-store inventory management, field sales mobility, service and maintenance applications.

When paired with a Smartphone or Tablet, the DLR-BT001 reader is a cost effective alternative to more expensive handheld devices.
